

November 25, 1957

Dear Mr. Kubota:

Today I am sending you two of these international letters in order to bring you up to date with developments since my last letter to you in April. I have thought of you many times since then, but because of the many demands upon me, and because of the lack of office help, it has been impossible to answer my mail as I would like. Now, however, as we are slowly putting into execution the plan suggested by the Brothers last winter, we are bringing this matter under control.

For the people of Japan I am asking your cooperation, because you have proven so steadfast and have kept the entire subject of our space neighbors entirely on the physical basis, where it belongs. For those people who live on other planets are just as physical as you and I, and their ships are as material, metallic, and mechanical as our own planes. The main difference is that they understand themselves and their purpose for being, while few on our planet have such understanding. This enables them to use Nature's forces for their mutual benefit, while such knowledge would be perverted by most of Earth's humanity.

As you say, there are many in Japan who believe in my reports. Most of them are unable to write English. This has been proven to me by the several letters in Japanese which I have received, and consequently am unable to answer. Many people there, as in other nations, hesitate to discuss their beliefs with others because of fear of disbelief and ridicule. Many personal meetings thus have never been shared with others for this same reason. So the Brothers suggested a get-acquainted program to be started in every nation, so far as possible.

To accomplish this, one person in each nation is asked to accept the responsibility of getting the people in his nation acquainted with one another either personally, or through the mail. I send to each leader or such representative, or co-worker, the list of my correspondents from his country, along with all letters on hand, which I have answered. After reading both the letter and the answer, this co-worker forwards my answer to the one to whom it was written. This will take time and a little money to get started with the postage, but it has also been suggested that those interested in receiving information be considerate enough to replace the postage to their countrymen who is helping them in this way.

In turn, I will do my best to keep all those who are working with me in this way informed of the latest information which I have received from our space visitors, to be passed on to all others interested in this matter. Sometimes this information will come regularly. Other times such reports will be further apart, but I will do my best because it is only through understanding that the people will be able to grow.

Also as time passes, information will be sent for those who desire more knowledge of themselves and their purpose for being, a greater understanding of and ability to use Universal laws. But first each national leader will have to be given the latest information regarding the space visitors and current events. That is what is contained in the other letter coming to you in this same mail. Yours is a carbon copy because my secretary does not have time to write each report individually, especially since they all contain the same information.

As time passes, too, the leader of each nation will be given the responsibility of answering for me the letters sent to me by his countrymen, which will be forwarded to him once a month. But not before he has been given sufficient information to be able to answer them. Therefore, I ask of each leader a report of his progress once a month, if possible, along with whatever questions might arise in his mind, or that have been asked of him as he has worked with his countrymen.
